

COMPLETED PROJECT REPORT

Project Title: Management system for VPCRAC research.

Research Agency: University of California – UC Davis

Principal Investigator: Salmon

Budget: \$29,594.00

Summary:

Final Report March 2000

Database manuals were created from CDFA files and reports representing progress reports and final reports for use by VPCRAC.

This project officially ended on December 31, 1999. However, in order to complete the project we worked during January and February 2000 to update the database to include all progress reports for existing projects submitted during the last quarter of 1999 and any new projects which had come on-line. We prepared complete sets of database binders for the three new VPCRAC members. We mailed the binders to the new members in early February. We also prepared complete update packets for the remaining committee members. We presented the packets to the members at the March meeting in San Diego. The database binders for the new members and the update packets for the other members represent our final report for this project.

We submitted a new proposal in late January 2000 to CDFA to continue the database from 7/1/2000 through 6/30/2002. However, the VPCRAC did not act on the proposal during the March meeting in San Diego.
